

## **FENOMENA PEMANFAATAN TIK PADA MAHASISWA**

Studi Deskriptif Analisis tentang Penggunaan Internet di Kalangan Mahasiswa STBA Yapari-ABA Bandung

Penulis: Tomi Tamtomo

### **Abstract**

The degree of responsiveness of STBA students to the future of ICT implementation in the learning processes, especially for those subjects related to foreign languages, has been inadequately stated only from observation. This research is one of the efforts to provide a snapshot of the facts among STBA students in relation with the issue. While revealing the characteristics of the current active Internet users in the campus, the research has also figured out that its usage to enhance students' learning processes is not yet to be taken into account: constituting a hole of opportunity for subjects taught in STBA to get into their Internet usage scheme. This should be carried out with optimism in the process, amid the fact that most of students' adoption processes to computer & Internet are mostly self-learned. That is also true while realizing that the nature of complexity of computer & Internet mastery are high.
